

Custom Homebuilding *Organizer*

WWW.FOXSIGNATUREHOMES.COM

HOW TO USE THIS ORGANIZER

Building a custom home requires a ton of decision-making! We created this organizer for our clients to help the process not feel so overwhelming and to have a central place (whether digital or analog) to keep all of their selections and other documents such as cabinetry elevations and layouts, tile and plumbing fixture lookbooks, slabsmith layouts, and landscape plans.

We searched endlessly for a template to assist our clients, but we never found one that quite met the requirements and format that we were looking for. They were either too generalized or didn't organize the information in a very user-friendly manner. We wanted a format that could help our clients visualize each room. So, we developed this one which separates all of your selections by room (instead of by category).

After downloading the organizer, you have the choice of using it in a digital format (by saving to an App such as GoodNotes) or printing a copy and putting it in a binder. Either way, you can add other documents along the way and you can always have this information available when meeting with vendors, trades and your contractor.

Each room is accounted for on each page (sometimes 2 pages). For each category of materials to be selected, there is a blank space for you to add the product information. If you are using a tablet to keep this organizer, you can easily make updates to these selections with the eraser tool. If you printed the organizer, we suggest using a pencil initially to write down your product selections, then using pen when those selections have been finalized.

We hope that this organizer will assist you in your home-building journey and help you build confidence in your decision-making.

Enjoy!

Mike & Polly
